## Harness Measurements

**NOTE:** It is very difficult to measure yourself accurately, so someone will need to assist. Use a soft measuring tape.

If there is an existing Mirage that fits you well or that you would like us to use for reference, list the serial number or harness size here.

Here are my measurements

I submitted my measurements in the online calculation form.

### STEPS FOR THE BEST AND MOST CORRECT FIT

1. While bending over as if touching your toes, tighten your leg straps most of the way (snug but not tight). The Mirage harness is designed to have the leg straps tightened first.
2. Next, to ensure the most comfortable fit, grab each leg pad one at a time, with both hands, and rotate it backwards slightly (leg hardware towards hip) bringing the hip ring into proper alignment.
3. Now finish tightening your leg straps until they are high and tight (like you're getting out of the plane).
4. Fasten your chest strap last.

#### Torso

- Measure both left and right as a double check.
- Measure from the BOTTOM of the dip in your collarbone at the base of your throat, diagonally over your chest, to the very TOP of your hip bone AT YOUR SIDE.
- The top of the hip bone is approximately the same height off the ground as your belly button
- Common mistakes are measuring too low on the hip (too long), or not enough to the outside (too short).

#### Long Girth

- Measure from the bottom of the hole at the base of your throat (same as torso measurement), down through the crotch and up your back to the base of the collar (protruding spine bone on the back of the neck).
- Tape should be snug but not painful. Gentlemen, move things off to the side.

#### Leg Pads

- Measure both left and right as a double check.
- Take EVERYTHING OUT OF YOUR POCKETS.
- Measure around the leg, as the leg strap travels, up to your hip bone.
- Be sure to pull the tape SNUG.
- The measurement should be in the range of 28" – 34" for most people.
- Some people like their pads to overlap, some like the ends to just touch, and others like a few inches of gap. All of these are safe as long as you are sitting on the pad and your strap feeds through with at least 5-6 inches of tail.

#### Waist

- This part of the harness cannot be adjusted, so you should look at this measurement first when looking at stock rigs.
- Measure around your waist at your belly button.
- Do not pull your stomach in. Be certain the tape is level.

*TIP: If you would like your rig to fit tighter against your back, we recommend using our small sit fly belly band. It attaches to your hip rings and can be removed when not in use. We also offer a larger belly band for swooping.*

#### Chest

- Measure at the nipples.
- Be sure to measure all the way around your back and that the tape is level across your back.
